ENGINEERING & INSPECTION

## The Mactech Voice

### Welcome

Welcome to the second edition of the Mactech Newsletter. This edition will focus on the services we provide here at Mactech, as well as our employees experience at a recent nuclear focused networking lunch.

### Mactech Engineering & Inspection

Mactech Engineering and Inspection was established in 1986, and since then has been supplying subcontract labour and inspection services to the power, nuclear, oil, gas, renewables, marine, and offshore sectors.

This has included delivering technical expertise on EPC projects, new builds, extension of plant activities and maintenance programmes.

Over the years, Mactech has evolved to meet their clients needs, ensuring quality standards are always maintained.

### Nuclear Experience

Mactech has gained extensive experience operating on nuclear power stations across the UK and Europe. Projects have included supplying engineering and construction personnel, inspection

services, QA/QC management, and decommissioning resources.

Mactech has also worked on a number of new build power stations in Europe.

Most recently, they have operated on Olkiluoto 3 in Finland. This involved supplying manpower for mechanical erection, supervision, QA/QC management, inspection and commissioning activities.

Over time, Mactech has grown a UK construction team with nuclear new build experience and can now offer a range of personnel through the lifecycle of a build as well as being able to provide security clearance through EDF.

### Nuclear Networking Lunch with EDF Energy

Our UK Business Manager, John McKenzie and Project

Coordinator, Paul Martin, recently attended a Nuclear Networking lunch held by NOF Energy. Over the course of the day, they learnt the strength of partnering and forming relationships for the common goal in nuclear new build.

EDF Energy were in attendance with a senior figure from the supply chain department speaking about the proposed plans for Hinckley Point C. EDF's presentation informed the attendees of the contracts that have already been awarded to main contractors for Civils, Mechanical, Electrical and more. This reinforced partnership importance.

John and Paul were also informed of the planned future projects at Bradwell and Sizewell, and the potential time frames for both of these.

Due to Mactech's extensive experience in the nuclear sector, we are strategically placed to support companies who are seeking a reliable and trusted partner.
